

Hospital Allocation Today

\$250 billion

Lost to inefficient hospital
flow and scheduling in the
US per year

4-12 hours

Average time spent
waiting for a bed from
the ER (~200 million
hours/year!)

~33%

% of nurse time lost to
coordinating logistics
(~3 billion hours/year)

Our Product

[See our Demo](#)

Multimodal, agentic hospital operations system for near-term patient escalation forecasting and efficient resource allocation

Executive Summary

- Company: Atria
- Product: Multi-agent hospital ops system for patient forecasting and resource allocation
- Market: Academic medical centers, hospital systems, and healthcare networks in the United States
- Mission: Transform hospital operations by providing AI-driven, privacy-preserving tools that optimize patient care, resource allocation, and provider scheduling
- Business Model: B2B SaaS subscription with pricing based on hospital size and bed count

01 Business *overview*

Problem

Hospitals can't reliably predict patient deterioration, and scheduling systems are highly inefficient

Solution

Atria predicts near-term bed and provider need and length of stay, then allocates resources using federated learning.

Market Trends

By 2033, the market for healthcare staffing and scheduling software is projected to reach \$3.1B.

Market Size for Global HMS

\$4.18B

TAM

Global annual revenue opportunity if every potential buyer purchases our solution.

\$1.60B

SAM

The portion of global market that we actually sell to and serve

\$16-48 M

SOM

Market share we can realistically obtain in the short term

Main Competitors & Our Differentiation

NexHealth

Automation for patient scheduling to payments.

Artera

AI-powered voice and text agents for patient journey.

Atria

We integrate multiple agents for an **end-to-end** workflow, with fully **proprietary** models.
We focus on ER patients and drive **immediate** impact.

Our Target

Academic Medical Centers (AMCs)

- AMCs with 200-300 beds.
- B2B SaaS: providing AMCs with end-to-end, unit-wide scheduling operations workflow.

Mid-sized Hospitals

- Hospitals with 300-500 beds.
- These customers will seek competitive advantage through operational efficiency.

Large Hospital Systems

- Hospitals with 500+ beds.
- These customers will have complex care coordination needs and existing EHR infrastructure.

Sales and marketing plan

Our Service

Multi-agent orchestration

Nurse, patient, provider agents all coordinate allocation in real time.

Explainable decisions

Users can ask why a staffing decision was made; live execution stream shows each step

Transcriptive Intelligence

Can actively transcribe provider-patient conversations into actionable summaries

3D Digital Twin for Ops

Interactive 4-floor, 56-room model replaces static spreadsheets
